

Maze Crawler Training Report - v49

Maze Crawler Training Report - v49

=====

Final Results:

- Best Eval WR: 96% (achieved at iteration 1820)
- Final Eval vs Random: 226W-186L-88D (45.2%)
- Total Iterations: 2000
- Total Training Time: ~15.9 hours (57222 seconds)

Key Milestones:

Hyperparameters:

Step reward: $\text{delta_gap} * 0.5 + \text{delta_units} * 0.1$

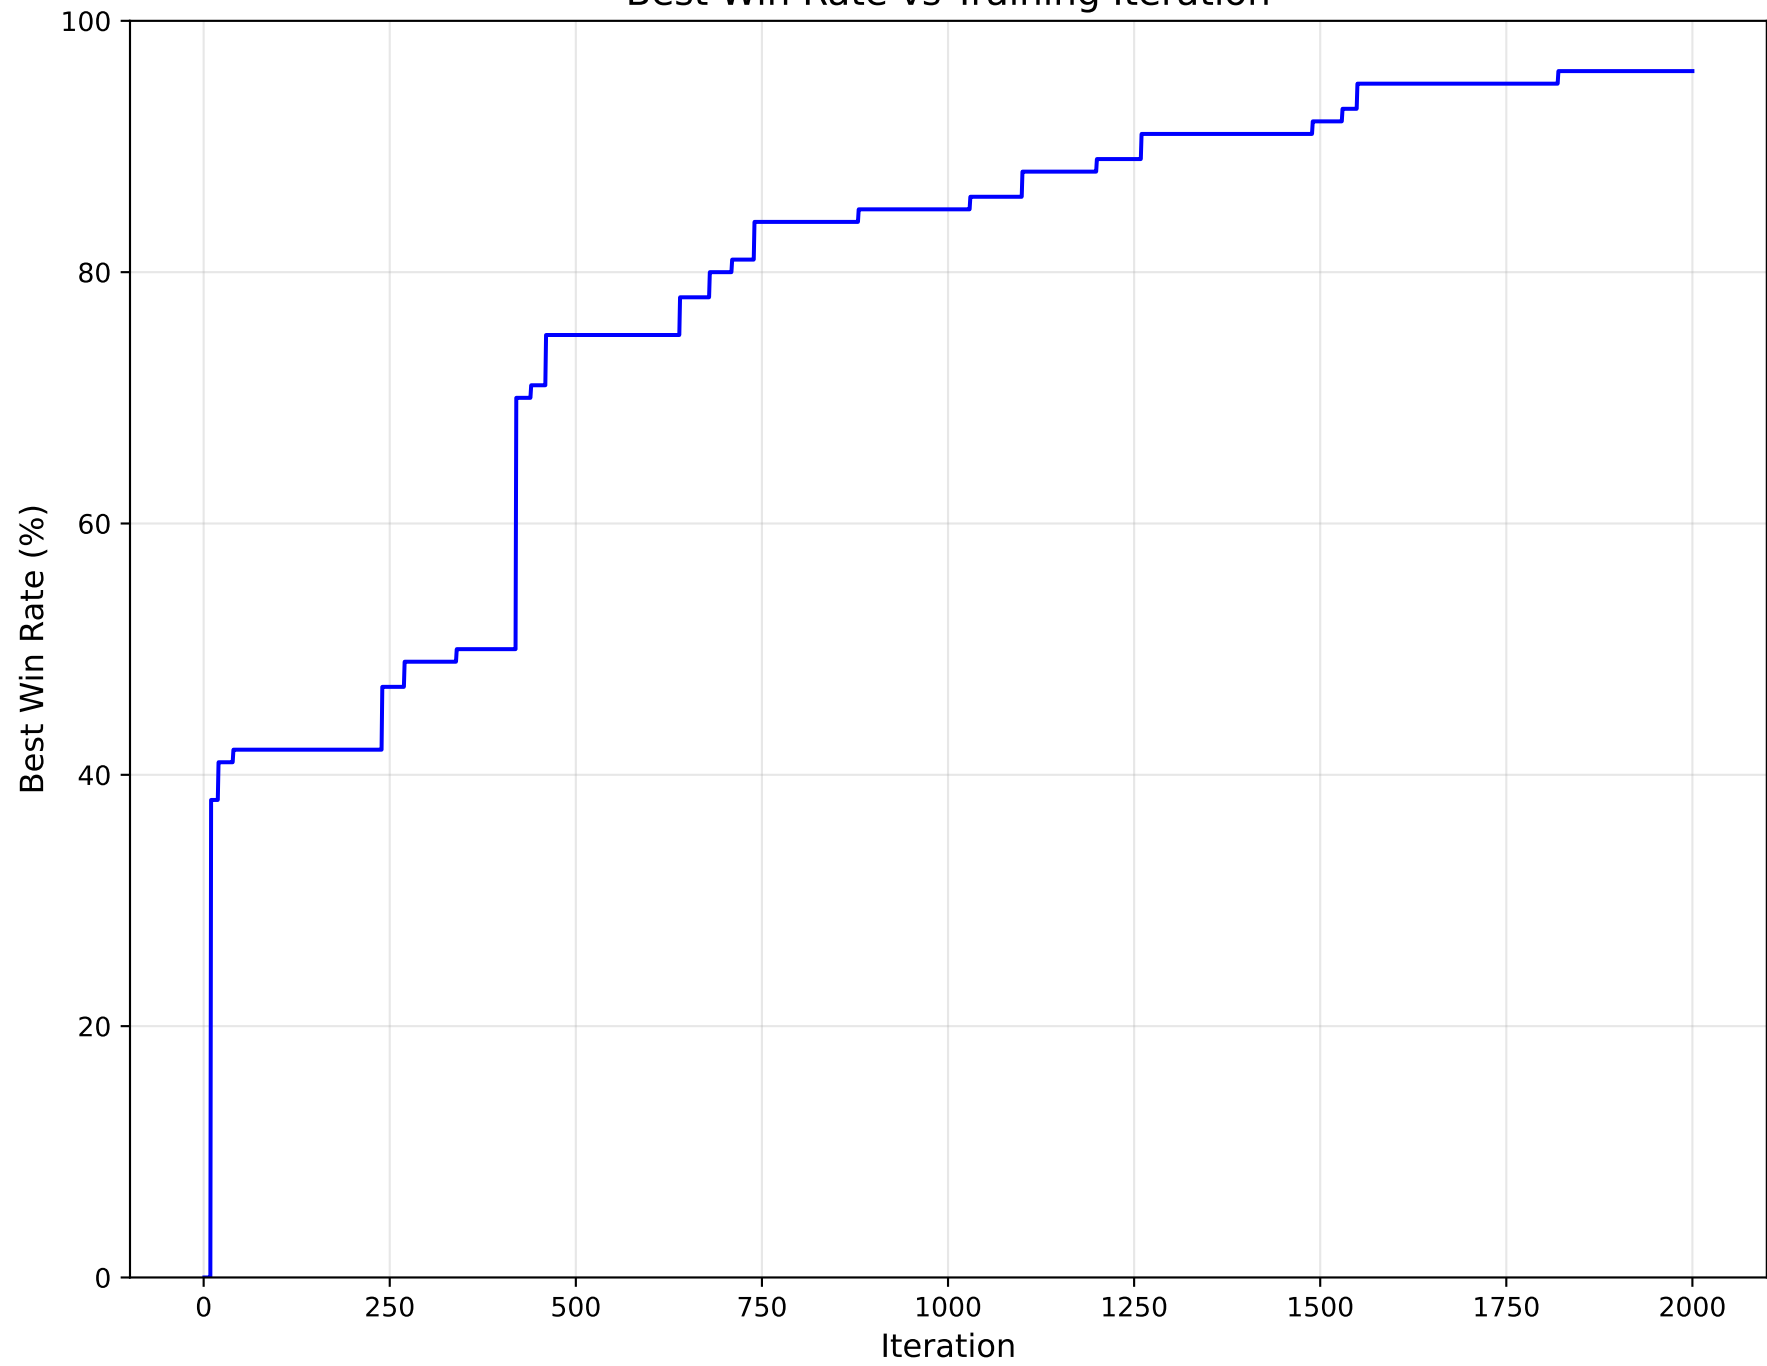

Terminal: +5.0 / -1 / 0 (draw)

Training: 100% self-play | Eval vs random every 10 iters (100 games)

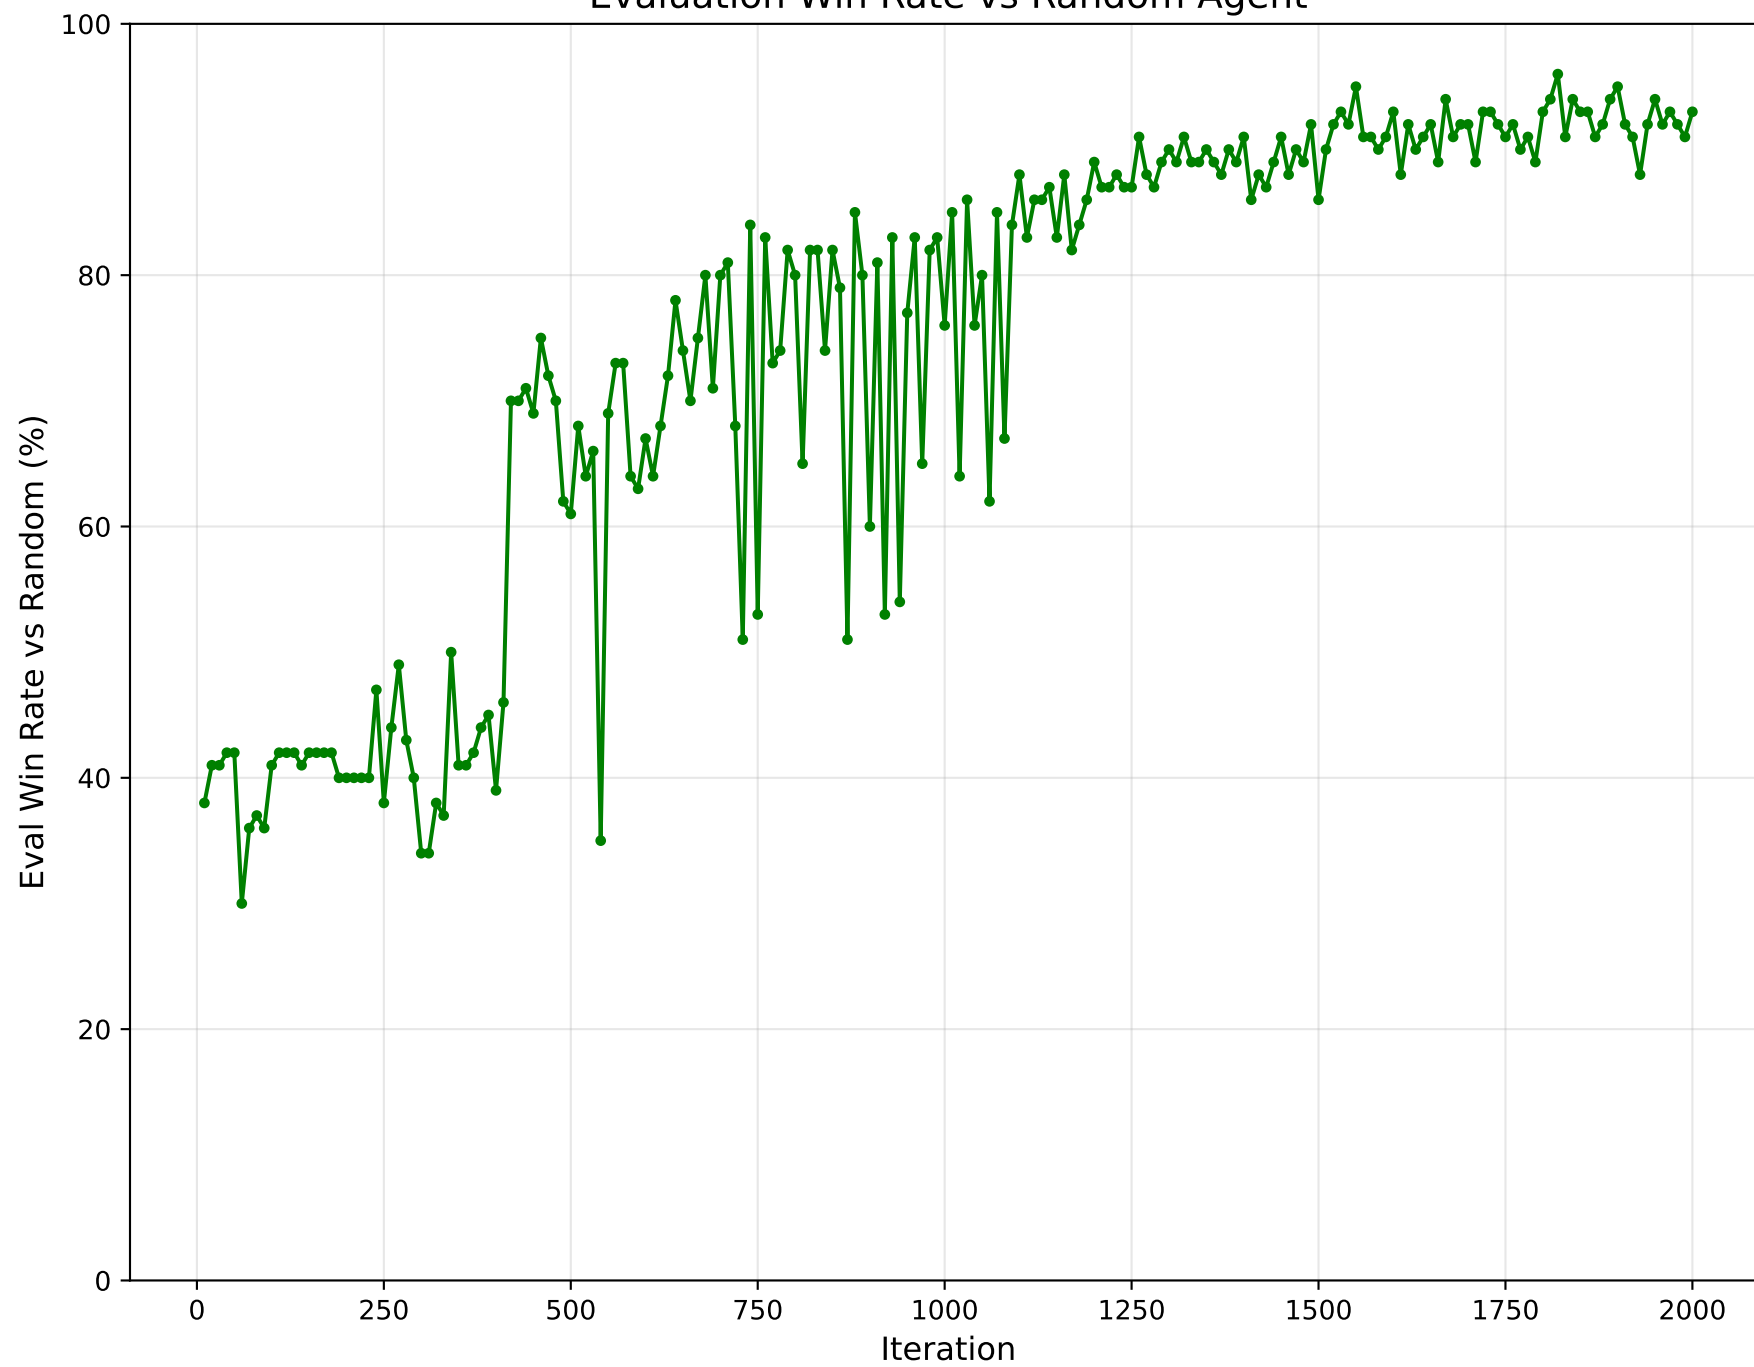

Training Observations:

- Early rapid improvement: 0% → 47% in first 240 iterations
- Steady progress through mid-training: 47% → 91% by iteration 1260
- Continued refinement in late stage: 91% → 96% by iteration 1820
- Entropy steadily decreased from 0.58 to ~0.18, indicating increasing policy certainty
- Policy value head steadily increased from 2.88 to ~2.07, indicating improved win probability estimation
